

## Contents

**349** Experimental study on vibration suppression in a rotor system under base excitation using an integral squeeze film damper

*Yan Wei (闫伟), He Lidong, Zhu Gang, Wang Shengli, Deng Zhe*

**360** Grouping pilot allocation scheme based on matching algorithm in massive MIMO system

*Xu Lei (徐磊), Wang Zhaorui, Yao Yijing, Zhao Xinying, Fang Hongyu, Li Xiaohui*

**367** Fraudulent phone call recognition method based on convolutional neural network

*Xing Jian (邢剑), Wang Shupeng, Ding Yu*

**372** Behavior recognition based on the fusion of 3D-BN-VGG and LSTM network

*Wu Jin (吴进), Min Yu, Shi Qianwen, Zhang Weihua, Zhao Bo*

**383** Dynamic A\* path finding algorithm and 3D lidar based obstacle avoidance strategy for autonomous vehicles

*Wang Xiaohua (王小华), Ma Pin, Wang Hua, Li Li*

**390** An effective indoor radio map construction scheme based on crowdsourced samples

*Guo Ruolin (郭若琳), Qin Danyang, Zhao Min, Xu Guangchao*

**402** Anti-occlusion pedestrian tracking algorithm based on location prediction and deep feature rematch

*Hu Zhentao (胡振涛), Mao Yihao, Fu Chunling, Liu Xianxing*

**411** Optimal UAV deployment in downlink non-orthogonal multiple access system: a two-user case

*Liu Tingting (刘婷婷), Wang Yuntian, Wang Junhua, Pan Ziyu, Yu Yu*

**417** A greedy algorithm based on joint assignment of airport gates and taxiways in large hub airports

*Nie Tongtong (聂彤彤), Wu Wenjun, He Qichang, Zhang Xuanyi, Sun Yang, Zhang Yanhua*

**424** Design of a clustered data-driven array processor for computer vision

*Shan Rui (山蕊), Deng Junyong, Jiang Lin, Zhu Yun, Wu Haoyue, He Feilong*

**435** An intraoperative lumbar neurological force monitoring system with high-density flexible pressure sensor array

*Zhang Qi (张琪), Zhang Xu, Li Caili, Liu Jianchao, Liu Ming, Yuan Fang, Chen Hongda*

**442** A multi-target stance detection based on Bi-LSTM network with position-weight

*Xu Yilong (徐翼龙), Li Wenfa, Wang Gongming, Huang Lingyun*

**448** A privacy-preserved indexing schema in DaaS model for range queries

*Hao Renzhi (郝任之), Li Jun, Wu Guangjun*

**455** A spatial decomposition approach for accelerating buffer analysis of vector data

*Li Xiaohua (李晓华), Guo Mingqiang, Qi Xinhong*
